

Log house 2.10.8

Net; m²	34,42	Dwelling-space of the building. Partially it also includes other useful elements of the building, i.e. the terraces.
1st Floor	32,86	Floor area inside the building.
Terraces	1,56	Roof construction covers and shelters about 2/3 of the terrace area, thus the useful area is reduced by 1/3.
Gross; m²	43,62	Building or foundation site covered by the 1st floor and terrace constructions.

Logs; m²	115,97	Area of logs (except apertures) precisely reflects material input of the building and forms the price of the project.
Coefficient	3,37	Proportion between the Logs and Net m ² . The lower the coef., the lower the price for a square meter of the dwelling-space.

The present architectural design is protected by copyright © law.
If you wish to order this very project, we will contact the author to receive permission.

Eko Nams Ltd only carried out development of the production or technical © project.
The three-dimensional views reflect architectural and constructive solutions for log buildings.
Project statistics helps to evaluate this project, taking into account the area of Logs in m².
